Material Types

No two pieces of wood are exactly the same. Stains are likely to exaggerate the difference between open and closed grains and other markings in wood. Grain variation and color change should be expected. As hardwood ages, it will darken when exposed to different types of light. Color differences or changes in wood can also be caused by exposure to harsh chemicals, extreme heat, or other contributing external conditions. Additionally, wood species exhibit other defining characteristics, such as mineral deposits/streaks, knots, sap runs, pin holes, and wormholes. These markings make the wood unique and contribute to its enduring beauty.

In keeping with our practice of continuous product improvement and/or to maximize efficiencies, Aristokraft may adjust specifications in design and materials as it deems necessary. Where differing materials are utilized, they will be of similar or better quality in keeping with Aristokraft's commitment to quality.

Birch is a tight-grained hardwood with a smooth, even texture that may be characterized with a curled or wavy grain pattern. Its coloring ranges from very blonde to brown to red/brown.

Hardwood finishes combine hardwoods and engineered materials including solid-wood, engineered materials—such as medium density fiberboard (MDF) and high density fiberboard (HDF)—and similar composite materials providing a smoother surface for painting and superior stability, consistency, and durability.

Maple is a tight-grained, uniform hardwood that may include fine brown lines, wavy or curled markings, bird pecks and mineral streaks. It is predominately white to creamy-white in color with occasional reddish-brown tones.

Paint will develop hairline cracks in the finish, most notably around the joints. This is a result of natural expansion and contraction of the genuine hardwoods used in the manufacturing of this product. Hairline cracks are not considered a defect in the cabinetry or finish and will not be considered a reason for product replacement. Painted doors, drawer fronts and components may be constructed of hardwood and/or engineered materials for a smoother finish and better resistance to warping, expansion and contraction.

PureStyle™ is innovative laminates that are applied to a wood or engineered wood substrate. Characteristics include crisp styling, consistent coloration, and abrasion-resistant durability.

Woodgrain PureStyle™ features design leading, high definition wood grain laminates on doors, drawer fronts, overlay fillers, and select trim items. Grain characteristics will vary across laminated parts to mimic natural wood patterns.

*On wood products, normal movement is typical due to change in climatic conditions. This will cause hairline cracks at stile, rail and panel joints. This hairline cracking is a normal characteristic of painted finishes and will not be considered a reason for product replacement.

Stained Wood Finishing Process

Stain application enhances the inherent differences in wood grain and characteristics. The stain naturally penetrates more or less in areas of open or closed wood grain. The combination of materials and processes were designed to produce these subtle differences to meet the overall market preference of a semi-transparent finish versus a painted stain appearance. Multiple process controls are implemented throughout the value stream to maintain overall consistency.

Seating Clearance

- ▶ 30" high tables/counters should allow a 24" wide by 18" deep space for each seated diner.

Clean-Up/Prep Sink Landing Area

- ▶ Include at least a 24" landing space on one side of the sink and 18" on the other.
- ▶ If all the countertop at the sink is not the same height, plan a 24" landing space on one side of the sink and 3" of countertop frontage on the other, both at the same height of the sink.

Preparation/Work Area

- ▶ Include a section of countertop at least 36" wide x 24" deep next to the sink for a work area.

- ▶ If cooking surface is at a different countertop height than the rest of the kitchen, then the 12" and 15" landing areas must be the same height as the cooking surface.
- ▶ For safety reasons, in an island or peninsula situation, the countertop should extend a minimum of 9" behind the cooking surface if the counter height is the same height as the cooking surface.

- ▶ A correctly sized, ducted ventilation system is recommended for all cooking surface appliances. The recommended minimum is 150 CFM.
- ▶ Code requires that the manufacturer's specifications be followed. Minimum exhaust rate for a ducted hood is 100 CFM and must be ducted to the outside.
- ▶ Make-up airway may need to be provided. Refer to local codes.

Did you remember...

Styles and Pricing

- ▶ Select Door Style and Pricing Level from your 20/20 design program. (If copying and pasting from one order to another, remember to reset styles and pricing.)

End Finishing Options

Consider exposed end options:

- ▶ Apply an End Panel Skin to create a flush end on the side of a Wall cabinet if installed at the end of a run for ease of Moulding installation.
- ▶ Apply decorative door kit (DBEP, DWEP, DVEP). This kit includes $\frac{3}{16}$ " skin, decorative doors, and screws for field installation.
- ▶ Underside of Wall Cabinets are natural laminate, with a few exceptions such as WMD, WOL, WWG and WPG (exclusions to apply and noted throughout the book).

Wood and Finish Characteristics

Review specific details with the customer:

- ▶ Mineral Streaks, Birdseye Dots, Grain Variations.
- ▶ Color Variations/Darkening.

Clearances

- ▶ Add fillers between end cabinets and walls on full overlay door styles.
- ▶ Allow space between door/window trim and end cabinets for countertop and top moulding overhang.
- ▶ Include refrigerator door hinges in overall refrigerator height when placing cabinets above it.
- ▶ For minimum pull requirements on blind corner cabinets, see charts on pages 94, 120, and 157.
- ▶ Allow sufficient clearance (3") on each side of accessory cabinets (such as roll-out trays, swing-out units, etc).
- ▶ Doors on these cabinets must open fully for accessories to be functional.
- ▶ Ensure the height between the cooktop and range hood is 24" to meet NKBA guidelines.

Advise customer carefully on upper cabinet/microwave advantages/disadvantages as follows:

- ▶ Minimum of 18" from cooktop to upper cabinet/above the range microwave which allows for easy access to either, but less room over back burner.
- ▶ Minimum of 21" from cooktop to upper cabinet/microwave which allows for access to large pots on back burner of cooktop, but longer reach to microwave.

Fillers

- ▶ Place fillers toward end of run where least conspicuous if needed.
- ▶ Attach overlay fillers on top of base, wall, or tall fillers when using full overlay door styles to maintain a consistent reveal. Don't forget to include blind corner fillers.

Matching Interior Cabinets/Glass Options

- ▶ Use light rail and skin to hide color variation between bottom of WOL Cabinets next to any other cabinets.
- ▶ Verify mullion door grid matches customer expectations. (Advise customer of shaker grid pattern.)
- ▶ The use of glass for base cabinet applications or for placement near interior or exterior doors is not recommended.

Mouldings

- ▶ All toekicks must be skinned with TOEKICK8, TOEKICK8-4, or TOEKICKFIN8.
- ▶ Verify the correct amount of moulding has been ordered.
- ▶ Order toekick caps.
- ▶ Order extra scribe.

Islands and Peninsulas

- ▶ Consider standard height bars are 35" tall and require 19" knee space. Raised bars are 42" tall.
- ▶ Consider Base Peninsula Cabinets (PB) are 23 $\frac{3}{4}$ " deep and require 12" of knee space.
- ▶ Use outside corner moulding if a skin is exposed on the back of the island.

Appliances

- ▶ Do not place dishwashers next to diagonal front cabinet (interference) or next to a range (no countertop support).
- ▶ Verify refrigerator door has enough clearance to open beyond 90 degrees so refrigerator drawers can be utilized. Refer to appliance manufacturer's specifications.
- ▶ Heat Shield Kits are available for order and may be necessary in some applications.

Miscellaneous

- ▶ Order touch-up kit for future repairs.

Tips to the Installer

#10 x 2 $\frac{1}{2}$ " installation screws are available to order for attachment to wall. Proper wall stud or ceiling joist installation is essential for Wall and Peninsula Cabinets to support weight. Whenever possible, cabinets should be attached to each other for additional strength. Excessive weight should not be put on cabinets hung by themselves. Shimming may be required to ensure proper alignment. Wallboard alone is not strong enough to support the cabinets.

Aristokraft's Warranty does not cover damage caused by improper installation. Please be sure to install cabinets properly and review all installation instructions. If you have questions, please contact your representative or customer service.

Wood Dust Warning

When cutting, sanding, sawing, or shaping cabinets or wood products, you are likely to generate wood dust. For your own safety, Aristokraft recommends that you wear a protective mask to prevent breathing wood dust. We also recommend eye protection to avoid injury by flying wood chips or sawdust during cabinet installation.

Warped Door Policy

Aristokraft cabinetry is constructed to strict specifications, including the moisture content present in wood. When the moisture content is maintained at a constant level, Aristokraft is able to minimize the amount of expansion and contraction associated with natural wood. When a great amount of expansion and contraction occur, the result can be a warped door. By strictly controlling the amount of humidity present during manufacturing, Aristokraft is helping to ensure you receive a quality product.

Because wood is a natural product, each piece of wood exhibits its own unique color and grain variations. These differences give wood its genuine beauty. The wood's natural properties also determine how each individual piece will react to changing weather conditions. Therefore, eliminating warped doors is virtually impossible.

If you feel that you have a warped door, Aristokraft requires that you perform initial testing to determine the extent of the problem.

1. Remove the door from the cabinet and remove all decorative surface knobs or pulls and hinges.
2. Place the door on a completely flat surface, as determined by using a level, and alternately press on the opposite corners to observe if the door "rocks" or pulls away from the flat surface.
3. If you observe a gap between the door and flat surface, measure the distance to determine the amount of warpage.
 - A door must be warped at least 1/4" before it can be considered for replacement. When ordering a replacement by using Aristokraft Part Replacement Order Form, be sure to fill in the reason for proper replacement code as "06".
 - If the door is warped less than 1/4", we recommend you allow a complete heating and cooling cycle (summer to winter) to allow the door to reach moisture equilibrium. Adding magnetic catches or roller catches will often correct minor problems.
4. If the door does not pull away from the flat surface, it is not warped. Most likely, there is a problem with the cabinet installation. When cabinets are not properly installed in a level or plumb position, they will become racked and will cause the door to appear warped. To check for a racked cabinet, place a level on one end rail. The bubble in the level will appear centered if the cabinet was properly installed in a level position. Now, place the level on the other end rail. Again, if the bubble appears centered the cabinet is properly installed in a level position. Any variations in the location of the bubble will indicate the cabinet was not properly installed. (A plumb bob will reveal the same information.)

Another proper installation check is to place the level in the top, and then bottom of the installed cabinet's face frame. Identify the bubble's position in both, top and bottom, locations of the face frame. The bubble's position will indicate if the cabinet was not properly installed.
